SAFETY NOTICE

ANY PERSON ATTEMPTING TO SERVICE THIS CHASSIS MUST FAMILIARIZE HIMSELF WITH THE CHASSIS AND BE AWARE OF THE NECESSARY SAFETY PRECAUTIONS TO BE USED WHEN SERVICING ELECTRONIC EQUIPMENT CONTAINING HIGH VOLTAGES.

CAUTION: USE A SEPARATE ISOLATION TRANSFORMER FOR THIS UNIT WHEN SERVICING.

IMPORTAN' SAFETY NOTICE

Proper service and repair is important to the safe, reliable operation of all Philips Consumer Electronics Company** Equipment. The service procedures recommended by Philips and described in this service manual are effective methods of performing service operations. Some of these service operations require the use of tools specially designed for the purpose. The special tools should be used when and as recommended.

It is important to note that this manual contains various CAUTIONS and NOTICES which should be carefully read in order to minimize the risk of personal injury to service personnel. The possibility exists that improper service methods may damage the equipment. It also is important to understand that these CAUTIONS and NOTICES ARE NOT EXHAUSTIVE. Philips could not possibly know, evaluate and advise the service trade of all conceivable ways in which service might be done or of the possible hazardous consequences of each way. Consequently, Philips has not undertaken any such broad evaluation. Accordingly, a servicer who uses a service procedure or tool which is not recommended by Philips must first satisfy himself thoroughly that neither his safety nor the safe operation of the equipment will be jeopardized by the service method selected.

* * Hereafter throughout this manual, Philips Consumer Electronics Company will be referred to as Philips.

WARNING

Critical components having special safety characteristics are identified with a $^{\mathbf{A}}$ by the Ref. No. in the parts list and enclosed within a broken line* (where several critical components are grouped in one area) along with the safety symbol $^{\mathbf{A}}$ on the schematics or exploded views.

Use of substitute replacement parts which do not have the same specified safety characteristics may create shock, fire, or other hazards.

Under no circumstances should the original design be modified or altered without written permission from Philips. Philips assumes no liability, express or implied, arising out of any unauthorized modification of design. Servicer assumes all liability.

* Broken Line - - -

FOR PRODUCTS CONTAINING LASER:

DANGER- Invisible laser radiation when open. AVOID DIRECT EXPOSURE TO BEAM.

CAUTION- Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

CAUTION- The use of optical instruments with this product will increase eye hazard.

TO ENSURE THE CONTINUED RELIABILITY OF THIS PRODUCT, USE ONLY ORIGINAL MANUFACTURER'S REPLACEMENT PARTS, WHICH ARE LISTED WITH THEIR PART NUMBERS IN THE PARTS LIST SECTION OF THIS SERVICE MANUAL.

b: Please refer to Service Information 4822 727 21995 for using the Service DDC Kit.

Warnings

- Safety regulations require that the unit should be returned in its original condition and that components identical to the original components are used. The safety components are indicated by the symbol .
- In order to prevent damage to ICs and transistors, all high-voltage flash-overs must be avoided. In order to prevent damage to the picture tube, the method shown in Fig. 1 should be used to discharge the picture tube. Use a high-voltage probe and a multimeter (position DC-V). Discharge until the meter reading is 0 V (after approximately 30 seconds).

3. ESD 🛕

All ICs and many other semiconductors are sensitive to electrostatic discharges (ESD). Careless handling during repair can drastically shorten their life. Make sure that during repair you are connected by a pulse band with resistance to the same potential as the ground of the unit. Keep components and tools also at this same potential.

- When repairing a unit, always connect it to the AC Power voltage via an isolating transformer.
- Be careful when taking measurements in the high-voltage section and on the picture tube panel.
- It is recommended that saferty goggles be worn when replacing the picture tube.
- When making adjustments, use plastic rather than metal tools.
 This will prevent any short-circuit or the danger of a circuit becoming unstable.
- Never replace modules or other components while the unit is switched on.
- Together with the defleciton unit, the picture tube is used as an integrated unit. Adjustment of this unit during repair is not recommended.
- **10.** After repair, the wiring should be fastened in place with the cable clamps.

Notes

- The direct voltages and waveforms are average voltages.
 They have been measured using the Service test software and under the following conditions:
 - Mode: 1024 * 768 (56.5kHz / 70Hz)
 - Signal pattern : grey scale
 - Adjust brightness and contrast control for the mechanical mid-position (click position)
- The picture tube panel has printed spark gaps.
 Each spark gap is connected between an electrode of the picture tube and the Aquadag coating.
- The semiconductors indicated in the circuit diagram(s) and in the parts lists are completely interchangeable per position with the semiconductors in the unit, irrespective of the type indication on these semiconductors.

17B CM2300

Electrical Adjustments

0. General

When carry-out the electrical settings in many cases a video signal must be applied to the monitor. A computer with :

- ATI GPT-1600 (4822 397 10065), Mach 64 (up to 107kHz)

are used as the video signal source. The signal patterns are selected from the "service test software" package, see user guide 4822 727 21046 (GPT-1600).

0.1 This monitor has 13 factory-preset modes as below.

640 x 400 31.5 kHz/70 Hz 1024 x 768 48.0 kHz/60 Hz 640 x 480 31.5 kHz/60 Hz 1024 x 768 60.0 kHz/75Hz 640 x 480 37.5 kHz/75 Hz 1024 x 768 68.7 kHz/85 Hz 640 x 480 43.0 kHz/85 Hz 1280 x 1024 64.0 kHz/60Hz 800 x 600 37.9 KHz/60Hz 1280 x 1024 80.0 kHz/75Hz 800 x 600 46.9 kHz/75Hz 1280 x 960 85.9 kHz/85 Hz 800 x 600 53.6 kHz/85 Hz

0.2 With normal VGA card:

If not using the ATI card during repair or alignment, The service engineer also can use this service test software adapting with normal standard VGA adaptor and using standard VGA mode 640 x 480, 31.5 kHz/60 Hz (only) as signal source.

0.3 AC/DC Measurement:

The measurements for AC waveform and DC figure is based on 640 x 480 31.5 kHz/60 Hz resolution mode with test pattern "gray scale". Power input: 110V AC

1. B+ supply voltage (3165) 78Vdc

- Apply a video signal in the 800 x 600 with 46.9 kHz/75Hz mode.
- Select the "cross-hatch" pattern.
- Set the brightness control and the contrast control to the minimum position.
- Pre-set trimming potentiometer 3165(+) and 3661(EHT) in mid-position.
- Set Vg2 (screen) to fully Counter-clockwise (zero beamcurrent).
- Connect a dc voltmeter between the joint of capacitor 2154 and ground (common ground).
- Set the B+ trimming potentiometer 3165 so that the reading on the dc voltmeter is 78 V +/- 0.2 Vdc.

2. High-voltage EHT (3661)

- Apply a video signal in the 800 * 600 with 46.9 kHz/75Hz mode.
- Select the "cross-hatch" pattern.
- Set the brightness control and the contrast control to the minimum position.
- Turn off the power.
- Connect a "high-voltage voltmeter" between the high-voltage connection of the picture tube and earth.
- Turn on the power.
- Set the EHT trimming potentiometer 3661 so that the "high-voltage voltmeter" reads 25.0 kV $\,$ +/- 0.2 kV $\,$
- Turn off the power.
- Remove the "high-voltage voltmeter" from the picture tube.
- Turn on the power again.
- Remove the "high-voltage voltmeter" from the picture tube.
- Turn on the power again.

3. Monitor the following auxiliary voltages.

SOURCE ACROSS C2158 + 12.0V +/- 1.0VDC (Audio). SOURCE ACROSS C2160 + 12.5V +/- 0.3VDC. SOURCE ACROSS C2156 - 6.3 V+/- 0.2VDC. SOURCE ACROSS C2152 + 191.0V +/- 1.5VDC.

SOURCE ACROSS C2154 + 78.0 V +/- 0.2VDC.

4. General conditions for alignment

- 4.1 During all alignments, supply a distortion free AC mains voltage to set via an isolating transformer with low internal impedance.
- 4.2 Align in pre-warmed condition, at least 30 minutes warm-up with nominal picture brightness.
- 4.3 Purity, geometry and subsequent alignments should be carried out in magnetic cage with correct magnetic field.

Northern hemisphere: H=0, V=450 mG, Z=0 Southern hemisphere: H=0, V=-450 mG, Z=0 Equatorial Support: H=0, V=0 mG, Z=0

- 4.4 All voltages are to be measured or applied with respect to ground.
 Note: Do not use heatsink as ground.
- 4.5 Adjust function controls " O " to center position except for contrast control which should be set to MAX.
- 4.6 Apply a video signal in the 1280 x 1024 with 64kHz/60Hz mode, select cross hatch pattern, set the Brightness for visible raster, adjust H-size for 340mm (19" monotor)/300mm (17" monitor) "raster width", adjust R3551 for Horizontal raster center.

5. To access factory mode:

- Turn off monitor (don't turn off PC)
- Hold " 🜣 " and " 🕕 " simultaneously on the front control panel , then press " ტ ", wait till the OSD menu with characters
- " factory mode (below OSD menu)" comes on the screen of monitor.

- If OSD menu disappears on the screen of monitor, press " again (anytime), then the OSD menu comes on the screen again.
- using " O, ": to select OSD menu.
 - : to increase or decrease the setting.
- Using " e to confirm the selection.

5.1. To leave factory mode

* After alignment of factory mode, turn off monitor (if you do not turn off monitor, the OSD menu is always at the factory mode), then turn on monitor again (at this moment, the OSD menu goes back to user mode).

6. OSD TIMER (During alignment)

During alignment, please use the "OSD TIMER" to keep OSD menu on screen.

TIMER Set OSD display time.

Electrical Adjustments (Continued)

7. Alignment of Vg2 cut-off point, white tracking (OSD control)

Equipment: 1. Video Test Generator-801GC (Quantum Data) 2. Color-analyzer (Minolta CA-100)

VG2 [(screen), at the bottom of the L.O.T.].

- * Apply a video signal in the 800 x 600 with 46.9 kHz/75 Hz mode, select the "full white pattern" (sizes 306 x 230 mm).
- * Use color-analyzer (Minolta CA-100) to adjust cutoff and white uniformity.

OSD R/G/B cut-off and R/G/B gain can be accessed, with initial data:

9300°K

R cutoff = 25%, R gain = 65% (l^2 C)

G cutoff = 25%, G gain = 65% (I^2C)

B cutoff = 25%, B gain = 65% (I^2C)

6500°K

R cutoff = 25%, R gain = 55% (${}^{1}C$)

G cutoff = 25%, G gain = 55% (1^{2} C)

B cutoff = 25%, B gain = 55% (I^2 C)

Brightness = 50%, Sub-Contrast = 85%, ABL = 50% (I^2C)

Step 2: Press " u for function selection as shown in Fig. 2.3.

Step 3: Use " Q, " to increase or decrease the value as shown in Fig. 2.3.

9,

- 7.1 Connect the video input, set brightness control at 50% and contrast at minimum position (OSD), Vg2 at Minimum (counter clockwise, and ABL (OSD) at 50% position.

 Slowly increase Vg2 voltage until light output is at 0.1 Ft-L +/- 0.01Ft-L (Y=0.1 Ft-L, on the screen of CA-100).
- 7.2 (The screen of monitor is dark now)
 - : Press " (a) " to show the OSD menu as shown in Fig. 2.1.
 - : Select the character "FACTORY MODE" to access the R/G/B adjustment as shown in Fig. 2.2 and Fig. 2.3.
 - : Adjust the cutoff of R/G/B to get 9300K (x=0.281 +/- 0.015, y=0.311 +/- 0.015), and brightness output at 0.07 +/- 0.01 Ft-L (Y=0.07Ft-L).
- 7.3 : Press " ① " to set contrast at maximum (100%). : Adjust gain of R/G/B to get 9300K

(x=0.281 +/- 0.015, y=0.311 +/-0.015, don't care about the Y value)

- 7.4 Apply a small white square 10 x 10 cm pattern, brightness set to center (50%), and contrast at maximum (100%), adjust Sub-contrast control (OSD) to reach 50 +/- 1 Ft-L.
- 7.5 Apply full white pattern at 9300K, adjust ABL (OSD) to reach 30+/- 1 Ft-L (contrast at maximum 100%, brightness at center 50%).
- 7.6 : Select the 6500K colour temperature as shown in Fig. 2.2.
 : Adjust the R/G/B cutoff and R/G/B gain as shown in procedure
 7.2~7.3 to get R/G/B cutoff x= 0.313 +/- 0.015
 y= 0.329 +/- 0.015

R/G/B gain x=0.313 +/-0.015 y=0.329 +/-0.015Y=45 +/-1 Ft-L

8. Picture geometry setting (factory pre-set modes)

- Apply a video signal with cross-hatch pattern.
- Apply a video signal in the 1024 x 768 with 46.9 kHz/75 Hz mode.
- Set brightness and contrast controls to their center positions (OSD control).
- 8.1 Horizontal geometry (OSD control)
- Adjust the H-width to 306 mm
- Adjust the H-phase to center position.
- 8.2 Vertical geometry (OSD control)
- Adjust vertical size to 230 mm
- Adjust V-phase to center position.
- 8.3 Trapezoid distortion (OSD control)
- Adjust the trapezoid to get optimal vertical lines.
- 8.4 Pincushion (OSD control)
- Adjust the pincushion to get optimal vertical line.

8

Electrical Adjustments (Continued)

8.5 Parallelogram (OSD control)

 Adjust parallelogram so that vertical lines are vertical or symmetrically about the center vertical axis.

8.6 Unbalance-pin (OSD control)

 Adjust the unbalance-pin so that that vertical border lines are aligned symmetrically.

8.7 Rotation (OSD control)

- Adjust picture so that vertical tilt is less than +/- 0.5mm.
- 8.8 Store the preset results by selecting the "exit" (OSD control).
- 8.9 Repeat the procedure 8.1 to 8.8 until all the preset timings have been adjusted completely

9. Focus adjustment

- : Apply a video signal in the 1024 x 768 with 60 kHz/75 Hz mode.
- : Select " @ " pattern.
- : Set the brightness at center (50%) and the contrast at maximum (100%).
- : Adjust focus potentiometers (top of L.O.T.) Focus 1 for horizontal focus and Focus 2 for vertical focus so that the picture at 2/3 of the diagonal lines (from center to four corners) of the displayed screen is as sharp as possible.

10. Loading DDC code

The DDC HEX data should be written into the DDC IC (7331) by EEPROM writer or equivalent method.

cable cover

0. Location of the panel

0.1 Main panel (1156)

0.2 Video panel (1157)

0.3 Power switch panel (1158)

1. General

To be able to perform measurements and repairs on the circuit boards, the monitor should placed in **Service Position (Fig. 3.1)** first:

How to remove the back cover of monitor:

There are 2 screws on the bottom of the monitor to fix the front cabinet and back cover of the monitor.

Step 1: Remove the "cable cover" as shown in Fig. 3.2.

Step 2: Turn the set to remove the 2 screws on the bottom side, as shown in Fig. 3.3.

Step 3: Turn the set to its original position.

Step 4: Remove back cover, then see left side view as shown in Fig. 3.4.

Step 5: Turn the set, then see right side view as shown in Fig.3.5.

Chassis:

After removing the back cover, you can see the inside the monitor with metal frame and metal shield see top side view as shown in Fig. 3.6.

- Remove 13 screws and cut away 6 wire ties for service position as Fig. 3.1.

Video panel

- Cut off 2 wire ties, after removing the metal frames, remove the metal shielding on rear side of Video panel for measurement.

Main panel:

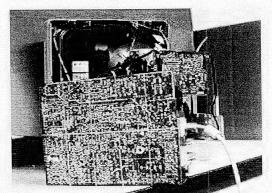

- After removing the metal frames,
- Disconnect "Video panel"
- Disconnect EHT cable (EHT cap)
- Disconnect 4 pin connector "M1401" (wire of YOKE, on Main panel)
- Disconnect 2 pin connector "M1112" (degaussing coil, on Main panel)
- Disconnect 1 pin connector "M1703" (on Video panel)
- Disconnect 5 pin connector "M1201" (on Main panel)
- -Disconnect 6 pin connector "M1802" (on Main panel)
- Disconnect 2 pin connector "M1205" (on Main panel)
- Disconnect 4 pin connector "M1204" (on Main panel) - Disconnect 4 pin connector "M1207" (on Main panel)
- To slide out Main panel.
- Connect all the connectors and panels for service position.

Service position:

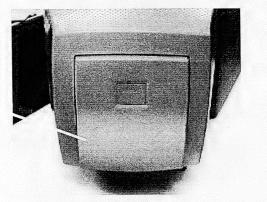

Place monitor in service position as shown in Fig. 3.1

2. Repair instructions

After the service position is obtained, all the panel's copper trace sides may be accessed.

Repair tips

Warning

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically. When repairing, make sure that you are connected with the same potential as the mass of the unit via a wrist wrap with resistance. Keep components and tools also at the same potential.

1. Servicing of SMDs (Surface Mounted Devices)

- 1.1 General cautions on handling and storage
- Oxidation on the terminals of SMDs results in poor soldering. Do not handle SMDs with bare hands.
- Avoid using storage places that are sensitive to oxidation such as places with sulphur or chlorine gas, direct sunlight, high temperatures or a high degree of humidity. The capacitance or resistance value of the SMDs may be affected by this.
- Rough handling of circuit boards containing SMDs may cause damage to the components as well as the circuit boards. Circuit boards containing SMDs should never be bent or flexed. Different circuit board materials expand and contract at different rates when heated or cooled and the components and/or solder connections may be damaged due to the stress. Never rub or scrape chip components as this may cause the value of the component to change. Similarly, do not slide the circuit board across any surface.

1.2 Removal of SMDs

 Heat the solder (for 2-3 seconds) at each terminal of the chip. By using a solder wick and a slight horizontal force, small components can be removed with the soldering iron. They can also be removed with a solder sucker (see Fig. 4.1A)

DISMOUNTING

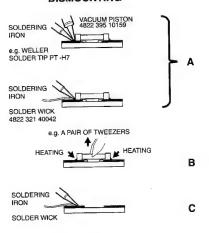

Fig. 4.1

- While holding the SMD with a pair of tweezers, take it off gently using the soldering iron's heat applied to each terminal (see Fig. 4.1 B).
- Remove the excess solder on the solder lands by means of a solder wick or a solder sucker (see Fig. 4.1C).

1.3 Caution on removal

- When handling the soldering iron, use suitable pressure and be careful.
- When removing the chip, do not use undue force with the pair of
- The soldering iron to be used (approx. 30 W) should preferably be equipped with a thermal control (soldering temperature: 225 to 250 °C).
- The chip, once removed, must never be reused.

1.4 Attachment of SMDs

- Locate the SMD on the solder lands by means of tweezers and solder the component on one side. Ensure that the component is positioned correctly on the solder lands (see Fig. 4.2A).
- Next complete the soldering of the terminals of the component (see Fig. 4.2B).

MOUNTING

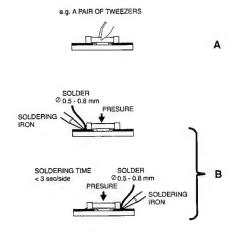

Fig. 4.2

2. Caution when attaching SMDs

- When soldering the SMD terminals, do not touch them directly with the soldering iron. The soldering should be done as quickly as possible, care must be taken to avoid damage to the terminals of the SMDs themselves.
- Keep the SMD's body in contact with the printed board when soldering
- The soldering iron to be used (approx. 30 W) should preferably be equipped with a thermal control (soldering temperature: 225 to 250 °C).
- Soldering should not be done outside the solder land.
- Soldering flux (of rosin) may be used, but should not be acidic.
- After soldering, let the SMD cool down gradually at room temperature
- The quantity of solder must be proportional to the size of the solder land. If the quantity is too great, the SMD might crack or the solder lands might be torn loose from the printed board (see Fig. 4.3).

CM23-17" General Description

1. Video pre-amplifier:

The TDA4885 (7301) is a monolithic integrated RGB pre-amplifier for colour monitor system with I2C bus control and OSD mixer. In addition to bus control beam current limiting. The signal are amplified in order to drive output driver LM2405 (77010. Individual black level control (pin 31/26/21 0f 7301) with positive feedback and 3 DAC outputs f(pin 32/27/22) for external cut-off control.

The RGB input signals with nominal signal amplitude of 0.7Vb-w are capacitively coupled (2308/2309/2310) into TDA4885 from a 75 (3301/3302/3303) source and actively clamped to an internal DC voltage during signal black level by CLBL (pin 5) signal from deflection controller. A fast signal blanking is driven by CLBL signal and control bit DISV=1.

The input signal related to the internal reference black level can be simultaneous adjusted by contrast control via I2C bus with 6 bits DAC. For white point adjustment the individual for three channels gain control are driven by I2C bus with 6 bit DAC too.

In the output stage the nominal input signal will be amplified to 2.8Vb-w output color signal at nominal contrast and maximum gain. Individual out put clamping is to set the reference black level of the signal output to a value which corresponds to the extend cut-off voltage of the CRT cathodes, all feedback reference are driven by I2C bus.

The output signal from pre-amplifier R (pin30), G (pin20) and B (pin25) are sent to LM2405 to have around 40Vp-p amplitude, which are AC coupled to the CRT and need to be clamped to cut-off level. These are achieved by the black level clamp circuits 7721, 7722, 6721, 6722, 2724 3723, 3724, 3725, 3726, 3727, 3786 for Red channel, the rest channel are identical to it and all of three channels are control by TDA4885 (R: pin 32, .G: pin22, B: pin 27).

The OSD signal are inserted during fast blanking active period, the OSD and fast blanking signal are generated by OSD IC LS4378.

2.0. Micro controller:

The micro controller P83C830 is monitor micro controller with DDC (DDC1, DDC2B, DDC2B+ and DDC2AB) interface to the PC host. The internal built in hardware can detect sync. presence for the VESA DPMS standard of various display mode with separated (pin 13: H 16; V) or composite sync. (pin15) signal. The digital/analog voltage output can be used to control the video and deflection function of the monitor.

Besides to control two bus driven IC TDA4854 and TDA4885 via I2C bus, micro controller output still handle the rest function as V-DC shift, rotation, brightness, volume, stand-by, off mode, degaussing, LED color, 70/86 KHz, H-unlock detector, ABL, s-cap switch, H-Dc shift, and H-linearity, of course it is USB HUB controller. After alignment the data are stored at EEPROM 7804.

CM2300 BRIEF

3. Deflection controller:

The TDA4854 is a high performance and efficient solution for autosync monitors. All functions are controllable by I2C bus. TDA4854 provides synchronization processing, horizontal and vertical with full autosync capability, it provides extended function e.g. as a flexible B+ control. and extensive set of geometry control facilities.

The HSYNC (pin15) is the input for horizontal synchronization signal which can be TTL separate or composite sync with positive or negative polarity. The horizontal oscillator capacitor at HCAP (pin 29) for optimum jitter performance the value of 10nF must not be changed. The given value is widely synchronised from 30KHz to 86KHz.

PLL1 phase detector compares the middle of horizontal sync with a fixed point on the oscillator sawtooth voltage. The PLL1 loop filter is connected to HPLL1 (pin 26). Via register HPOS the I2C bus allows a linear adjustment of the relative phase between horizontal sync and oscillator sawtooth (in PLL1 loop). Via registers HPARAL and HPINBAL correction of pin unbalance and parallelogram is done by modulating the phase between oscillator sawtooth and horizontal flyback (in loop PLL2).

The PLL2 phase detector is similar to PLL1 detector and compares the line flyback pulse at HFLB (pin 1) with the oscillator sawtooth voltage. The control currents are independent of horizontal frequency. The PLL2 detector thus compensates for the delay in the external horizontal deflection circuit by adjusting the phase of HDRV (pin8) output pulse.

EWDRV (pin 11) provides a complete EW drive waveform. The components horizontal pincushion, size, corner correction, and trapezium correction are controlled by the registers HPIN, HSIZE, HCOR and HTRAP.

The VSYNC (pin14) is the input for vertical synchronization signal it can be TTL separate or extract from composite sync. with positive or negative polarity. The widely synchronization range from 50 to 160Hz.

The amplitude of the differential output currents at VOUT1 and VOUT2 can be adjusted via register VSIZE. Register VPOS provides a DC shift at the sawtooth output VOUT1 and VOUT2 (pin 13 and pin 12) and the EW drive output EWDRV (pin11) in such a way, that the whole picture moves vertically while maintaining the correct geometry.

The horizontal moiré (also known as video moiré) can be cancelled by controlling register HMOIRE and cancelled vertical moiré (scan moiré) by controlling register VMOIRE.

The B+ function block cab be used for buck converter in feed forward mode. It provides a frequency independent pulse width to control the deflection circuit.

CM5800 BRIEF

Horizontal deflection:

The horizontal output signal 7503 pin 8 (limited at very low amplitude around 1.4Vp-p) directly fed to driver stage 7601, after boost to about 150Vp-p and amplifies current drive capability it drives output transistor 7602 to reach expected deflection current. The horizontal linearity correction circuits is composed by 4 segment S-cap. switch (7614, 7615, 7616, 7617) and one controllable linearity coil 5606 to get optimised linearity

The B+ control output signal is modulated with geometry control and size control signal together, it directly fed to buck converter 7605 via buffer stage 7603, 7604 to supply an adequate deflection voltage to output stage. The horizontal raster position control circuits is composed by 5603, 6605, 6606, 7606, 7607, 3607, 3608, 3611, 3612, 3613 and 5604 to reach right center position. To correct the tilt symptom while monitor facing the different direction or operating at various place, the rotation coil (plus control ckt. 7611, 7626, 7627...) is need to against the magnetic field changing.

5.0 EHT generator and Vertical output stage:

The EHT generator supplies 25KV anode voltage to picture tube. The generator is fully separated from the horizontal deflection but it is synchronized with the input horizontal sync. signal, this will prevent interference in the picture.

The output voltage is stabilised at 25KV. Feed back is taken from the anode via focus pack and 3659, 3660, 3662, 3661, 3406, 3436, 2419 fed to L4990A pin5 to get very stable EHT so there is no need to compensate the deflection for EHT variation. The out voltage is kept constant by regulating the supply voltage of the EHT output stage. This regulation is done by means of a duty cycle controlled series regulator (7621 controlled by L4990A).

The generator is protected against over beam current (over load) and over voltage (x-ray). Over load protection, if beam current high than 1.2mA then 7405 will be conducted and 12 Vdc directly fed to L4990A pin 14 the whole output will shut down immediately. It is activated if EHT exceed 27.5 - 29.5 KV, the generator will be switched off immediately and a restart can only be made by switching the monitor off and on, this circuits is composed by 6404, 2406, 6415, 6416, 3435 and L4990A.

EHT generator also supply tertiary voltage for concern circuits like:

+/- 13 Vdc and +50Vdc

: for vertical output stage

-150Vdc

: for spot killer

+320Vdc

: for vertical dynamic focus

Under this configuration, stand-by mode just switching off L4990A output (pull pin 7 to ground) to achieve less than 15 Watt consumption.

TDA 4854 vertical differential output pin 12/13 fed to 7404 TDA4861 input pin2/3 and

boost to expected deflection current around 1.5Ap-p.

Audio:

As usual we use one integrated 2 X 1 Watt IC for audio power amplifier, the input signal is 800mVrms and applied 25 speaker to get 1 Watt min. output for each channel. Audio function facilitate with microphone in/out, headphone out for multimedia application.

7.0 Power supply:

The power supply works at a fixed frequency about 40KHz in flyback mode and suitable for universal line input 90-264Vac. The proper PTC for the degaussing part, it working automatically at switch on for about 6 seconds or pushing an external button via OSD under PTC cold condition.

The mains voltage, rectified 6102 (GBU6J) and filtered 2105 (330µF/400V), is applied to the power transformer 5101 which switching the power transistor 7105, transfer the energy to secondary side. Besides, an auxiliary voltage is obtained from the primary side to supply the power controller MC44603 and MHR circuits (mains selection point 180Vac)

The hard start current is supply by rectified mains, current amplifier 7104 is implemented for power saving purpose. The power transformer secondary side rectified and filtered out defined voltages: +190V, +78V, -6.3V, +12V, (+8V, +5V are drop out from +12V). +78V is sensed and subtracted to a stabilized reference voltage; the error signal is amplified and send to PWM circuits via optocoupler, where it is compare with ramp waveform to keep constant voltage output by modulating duty cycle.

The primary current is sensed by the resistor 3116/3117, when current increase to over current threshold point then power shut down immediately. When a short circuits occurs on the outputs at high voltage (+190V, +78V), the primary current increase in such a way that the power supply turns off. As regards to low voltage (+12V, -6.3V, +8V, +5V) output short circuits because of low power consumption increase and primary current does not reach the turn off threshold. For this reason, these output are short circuits protected by extra circuits 7156 (for -6.3V), 7158 (for +12V, +8V, +5V).

An OVP circuits is built inside the power controller, while the voltage Vc above +17V and output is shut down immediately.

Power management off mode is directly short circuits optocoupler pin 2 to ground and let power supply enter burst mode, it delivery out very low power (less than 5 watt).

Use the information file (philips.inf) for Windows '95

Philips' monitors build in VESA DDC1/2B feature to support Plug & Play requirement for Windows '95. You can install this information file (philips.inf) in order to select your Philips monitor from "Monitor" dialog box in Windows 95 to activate Plug & Play application. The installation procedure based on Windows '95 OEM Release 2 is specified as follows,

- 1. Start Windows '95
- 2. Click the 'Start' button, point to 'Settings', and then click 'Control Panel'
- 3. Double-click the 'Display' icon, select the 'Settings' tab, then select "Advanced Properties" tab.
- 4. Select "Ok" in the "Install From Disk" dialog box.
- 5. Now, you can see the Philips monitor is appeared.
- 6. If the model name of Philips monitor is correct, click "Ok" tab in "Select Device" dialog box.
- 7. Then, click "Close" tab in "Advanced Properties" dialog box.
- 8. Now, you can select "Refresh Rate" to change monitor resolution

If your Windows '95 version is different or you need more detail installation information, please refer to Windows 95 user's manual.

HFG INSTRUCTIONS

1. High Frequency Generator (HFG)

Supplier ELECTRO-TECHNIC PRODUCTS 4642 N. RAVENSWOOD AVE. CHICAGO. ILL. 60640 AREA312, USA PHONE: 561-2349 TYPE(MODEL):BD-10-A (240VAC)

2. Condition, if poor focus with:

- -Flick on background white
- -White level various when adjust focus control (focus knob on flyback x'mer)

3.HFG Procedure:

The operation procedure of this tool is as following,

- Step 1. To dis assemble monitor chassis (includes grouding wire)/FHT cap from CRT and let CRT independent.
- Step 2. To keep the gap of HFG at max position and the output voltage is almost zero at this moment.
- Step 3. To connect CRT Anode to CRT ground by extra grounding wire.
- Step 4. To apply HFG output pin to CRT focus pin(s) and power on HFG.
- Step 5. To gradually decrease HFG gap to min position (increase the output voltage), and continue the voltage to CRT Focus pin(s) about 2 min.
- Step 6. Power off HFG and disconnect CRT anode grounding wire.
- Step 7. To re assembly monitor chassis/EHT cap to CRT immediately, then apply signal and power on the monitor as soon as possible. Let the monitor warm up at least 5 min.
- Step 8. To re adjust focus/G2 and White balance if necessary.
- Step 9. To perform function check according to product specification.

Please be informed that step 7 is the important of this procedure. The monitor should be warm up as soon as possible to prevent CRT cathode low emission.

- 4. Alternative procedure (before you buy HFG)
 - -Power off monitor and system
 - -Remove video pwb
 - -I/F cable must be connected to PC (keep signal input)
 - -Power on monitor and system short circuit for focus pin (see service manual) to ground (eg. metal bracket) with 1 or 2 seconds

Advanced DDC Programming Kit

(July 01 1997 Revision 2.0)

97.01

SEMICEINIOMEUDA

Service information 4822 727 21038 is herewith cancelled.

This [DDC Module (DDC cable)= 4822 320 12004(=4822 724 27550)] and

[DDC V2(DDCV2N.EXE) software(3.5" disk)=4822 711 00024(= 4822 724 27560)]

are used for "BU Monitor - Chungli product range" which incorporates a DDC1/DDC2B function that allows bi-directional communication between the monitor and PC system for optimal video configuration.

[July 01 1997, Revision 2.0] ,which upgrades the software and service information(4822 727 21027 & 4822 727 21038) , is fully compatible with previous one.

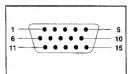

Additional information:

Additional information about DDC (Display Data Channel) may be obtained from Video Electronics Standards Association (VESA). Extended Display Identification (EDID) information may be also be obtained from VESA.

Pin assignment

The 15-pin D-sub connector (male) of the signal cable

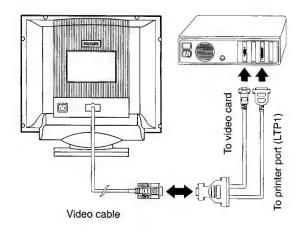

(3 rows) for DDC feature:

Pin No.	Assignment	Pin No.	Assignment
1	Red video input	9	No pin
2	Green video input	10	Logic ground
3	Blue video input	11	Identical output
			connected to pin 10
4	Identical output	12	Serial data line
	connected to pin 10		(SDA)
_ 5	Ground	13	H.sync
6	Red video ground	14	V. sync (VCLK for
7	Green video ground		DDC)
8	Blue video ground	15	Data clock (SCL)

Connection

(Rear of the monitor)

DDC data re-programming

1. General

In case the DDC data memory IC, replaced due to a defect the data contents of this IC have to be re- programmed via a PC.

In case of replacement of the video (or deflection) board it is advised to re-soldered DDC IC from the old board onto the new board, in this case the IC dose not need to be re-programmed.

2. DDCV2N.EXE can be used for : EDID Structure Version/Revision

	LDID CHACKAIO	4 C : 0 ! O ! I ! ! ! C V	131011
	Version	: 1	
	Revision	: 0	(text file)

INSTRUCTIONS

DDC Reprogramming Instruction (for PHILIPS Branded models)

System Requirements

DDC Module (DDC cable), P/N = 4822 320 12004 An Intel 386 (or above) PC or compatible DOS 6.0 or above DDCV2N.EXE software

Procedure

Connect DDC Cable as shown in cover page.
Insert diskette in Drive a: Select Run "DDCV2N.EXE" under DOS or Win.
Press "Enter" at the introduction screen

Menu Configuration:

File	R/W	Setup	Quit
Load EDID Load txt file (V1.0) Save EDID Save txt File Convert EDID Code Os shell Exit	Write EDID to EEPROM Read From EEPROM Edit EDID Code Auto Scan	Options Barcode format	

General:

1. How to change drive

Use arrow keys to highlight "Options" under the Setup menu, Press "Enter". Press "F2", then Press "ESC", fill in "A" or "C". [(If your .HEX files for different Model numbers in drive "A", then fill in "A")., (If your .HEX files for different Model numbers in drive "C", then fill in "C"). Normally, to read DDC data from EEPROM of Monitor is enough.]

Press "Enter", then Press "ESC"

2. How to select .HEX files for different Model numbers example:

Use arrow	keys to highlig	ht "Load EDID" under the File menu, Press "Enter"
Bring up	BRANDED\	Press " Enter"
n .		
Bring up	\	
	21B772BE\	
	CM58\	select, Press "Enter"
Duin a		at this bightight area. Buses II stand the areas to the term
Bring up		at this highlight area, Press "Enter", then go back to last screen
	19A74C.HEX	← select for 19A580BQ/74C
	19A00C.HEX	← select for 19A580BQ/00C

INSTRUCTIONS

How to write DDC hex files to Monitor

Use arrow keys to highlight "Options" under the Setup menu, Press "Enter"

Tab down to ID Serial Number, Use down arrow key to place the asterisk (*) beside "store in DEC with LSB first". Press "control/enter" to save.

(Ensure the top asterisk (*) is beside in store in HEX with LSB first.)

Use arrow keys to highlight "Load EDID" under the file menu, Press "Enter".

Use arrow keys to highlight "BRANDED\", Press "Enter".

Use arrow keys to highlight "the model list under subdirectly", Press "Enter".

Use arrow keys to highlight "Write EDID to EEPROM" under the R/W menu, Press "Enter".

Use arrow keys to highlight "Read from EEPROM" under the R/W menu, Press "Enter".

Use arrow keys to highlight "Edit EDID Code" under the R/W menu, Press "Enter".

Verify the ID Serial number on the screen matches the serial number of the unit.

Verify EDID Structure Version is "Version :1, Revision :1

Press "ESC"

Use arrow keys to highlight "Quit", Press "Enter".

Menu Configuration:

File	R/W	Setup	Quit
Load EDID Load txt file (V1.0) Save EDID Save txt File Convert EDID Code Os shell Exit	Write EDID to EEPROM Read From EEPROM Edit EDID Code Auto Scan	Options Barcode format	

Remark: ID product code and ID Serial Number setting are for "PHILIPS" & "STENCIL" DDC TEXT

44 Advanced DDC Kit

INSTRUCTIONS

How to change the Year, Week & Serial number of Monitor (for BRANDED models)

Use arrow keys to highlight "Barcode format"," under the Setup menu, Press "Enter".

Bring up:

Barcode example: 9741222266
Barcode format: YYWWSSSSS

continue:

Barcode example: 9741222266
Barcode format: YYWWSSSSS

Manufacture Year: 1997
Manufacture Week: 41
Serial no: 222266

EDID [16] Week: 29
EDID [17] Year: 07 [Year-1990]
EDID [12..15] S/N.: 0003643a

Fill in 9741222266, press "Enter Fill in yywwsssss, press "Enter

Fill in "Y", don't press "Enter"

There is a description at the lower of the screen for Barcode format as below.

Barcode format : Y,W,S,X,- (year,week,s/no,ignore,fixed)

data correct ? (Y/N) Y

Y stands for "year". W stands for "week"

S stands for "s/no (serial number)".

X stands for "ignore". Allow user to fill in any 'character' or 'numeric'.

stands for "fixed". User have to fill in Special 'character' or 'numeric' for "AutoScan" if user fill in '-' at "Barcode format :".

Use arrow keys to highlight "Auto Scan" under the R/W menu, Press "Enter".

Bring up:

Auto Scan

year, week, serial number can be changed

□ SerialNumber

♦ YearCode

△ WeekCode

* don't care

Fill in "Barcode data (for instance: 9741222266)" beside Auto Scan, press "Enter"

9745000240

9640001000

Press "ESC" "ESC", return to R/W menu.

How to change the serial number of Monitor (for PCEC models)

Use arrow keys to highlight "Barcode format"," under the Setup menu, Press "Enter".

Bring up:

Barcode example : 5800C12345678

Barcode format : XXXXXSSSSSSS

Fill in 5800C12345678, press "Enter

Fill in xxxxxxxsssss, press "Enter

continued:

Barcode example : 5800C12345678

Barcode format : XXXXXSSSSSSS

Manufacture Year: 1997

Manufacture Week: 40

Serial no.

: 12345678

Serial no. ASCII : 5800C12345678

..........

data correct ? (Y/N) Y

Fill in "Y", don't press "Enter"

(can be changed), press "Enter"

(can be changed), press "Enter"

Fill in 5800C12345678, press "Enter"

There is a description at the lower of the screen for Barcode format as below.

Barcode format: Y,W,S,X,- (year,week,s/no,ignore,fixed)

Y stands for "year".

W stands for "week"

S stands for "s/no (serial number)".

X stands for "ignore". Allow user to fill in any 'character' or 'numeric'.

- stands for "fixed". User have to fill in Special 'character' or 'numeric' for "AutoScan" if user fill in '-' at "Barcode format:".

Use arrow keys to highlight "Auto Scan" under the R/W menu, Press "Enter".

Bring up:

Auto Scan

year, week, serial number can be changed

□ SerialNumber

YearCode

△ WeekCode

* don't care

Fill in "Barcode data (for instance: 5800C12345678)" beside Auto Scan, press "Enter"

5800J28256153

58008H75602720

Press "ESC" "ESC", return to R/W menu.

PCS 98 294

6 Advanced DDC Kit

DDC DATA TEXT FILE

For the original DDC TEXT file:

Use arrow keys to highlight "Load txt file (V1.0)" under the File menu, Press "Enter"

- Data text file editing options
 The data text file can be edited by the DOS-editor.
- 2. Re-programming instructions
 - Turn on PC and monitor
 - Connect the module to the PC and monitor, see connection figure on front page.
 - Insert the floppy disk into drive A: and follow the following
 - Type "DDC" and then press "ENTER". On the screen it will show: "Adaptor check...", then the screen will display "main menu".
 - Use the arrow keys to highlighting items 1, 2, 3, 4, 0:
- Step 1 Select item "1", which appear as a highlight, and press "ENTER" to convert a text data into EDID data.
 - Enter the text file name with directory path eg.
 "a:\CM0200\BND14PHL.TXT" and press "ENTER".
 The available text file on the floppy will now be converted into a binary file that can be downloaded into the memory IC.
 - Press "ENTER" to continue, the program will return to main menu.
- Step 2 Select item "2" ,under the main menu , and press "ENTER" to write a complete EDID data file to EEPROM. Now, the data will be loaded into the memory IC
 - Press "ENTER" to continue, the program will return to main menu.
- Step 3 Select item "3" ,under the main menu,and press
 "ENTER" to verify that EDID downloading is successful.
 This function also can be used to view current DDC
 data in monitor.
 - Press "ENTER" and follow the indication on the screen to return main menu.
- Step 4 Select item "4" ,under the main menu,and press "ENTER" to enter DOS prompt and DOS Editor of your system. By DOS Editor, the function allow you to modify or update DDC data eg. manufacturing week, serial number etc according to the rear cover type label of the set.

The production serial number of type label consist of:

TY - origin of production centre

00 - technical service change code

95 - production year

12 - production week

123456 - 6 digits (max) serial number

Once the modification of DDC text file is completed under DOS Editor, Quit to DOS prompt and return to main menu by typing "EXIT" and press "ENTER".

After text file is modified according above description, you can repeat the process of step 1 to step 3 to reprogram DDC data again.

Step 5 - Select item "0" ,under the main menu,and press "ENTER to quit DDC program and return to DOS prompt.

3. Remark 1:

During the re-programming, it is recommended to follow step 1,step 2, and step 3.

Due to different format requirements by customer, If read DDC data from monitor by step 3, product ID and serial number will show 3 formats, <decimal>, <hexa-decimal>, and <ASCII>, the correct format can be obtained by running step 1 again (the correct format can be detected and identified automatically by step 1 from original text file).

INTRODUCTION AND SAFETY

Introduction

The Philips 107MB color monitor displays sharp and brilliant images of text and graphics with a maximum resolution of 1280x1024 pixels. It is optimal for Windows, CAD / CAM / CAE, desktop publishing, spread sheets, multi-media, and any other application that demands a large screen size and high resolutions.

The monitor automatically scans horizontal frequencies from 30KHz to 86KHz, and vertical frequencies from 50Hz to 160Hz. With microprocessor-based digital-controlled circuitry and On Screen Display (OSD) controls, the monitor can automatically adjust itself to the video card's scanning frequency and can display an image with the precise parameters you desire.

Features

- An anti-glare, anti-static, anti-reflection, high-contrast screen coating eliminates any bad effects caused by room light reflecting on and dust attracted to the screen's surface.
- With the Color Adjustment feature, you can easily choose different preset color temperatures or set your own customized color parameters.
- The Image Tilt Adjustment feature corrects a rotated image. This adjustment compensates for the distortions caused by elements such as the Earth's magnetic field.
- The full-size feature expands the image on the monitor to fill the screen when used in factory preset modes.

- Optional USB Connector at the back of the monitor is prepared for the Universal Serial Bus hub. You can easily and flexibly connect USB-designed devices — such as a mouse or keyboard — to the monitor for true Plug-and-Play function. The USB hub is an accessory that may be purchased from you local Philips dealer.
- Green Design including automatic power saving function (NUTEK) and low-emission compliance (optional TCO '95) – shows your commitment to the environment.
- DDC1 / DDC2B allows communication between the monitor and the PC for optimal video configuration.
- Moire Cancellation eliminates diffraction, a fringe pattern in the picture.

Note: Your monitor operates according to the VESA-standard DDC level 1 / 2B. Only computers that support the same guidelines and operate at an equal or higher level can use this feature. If your computer does not support the relevant guidelines, you can still use your monitor and computer. However, you may need to manually specify the appropriate resolution in the computer.

As an Energy Star Partner, Philips has determined that this product meets the Energy Star guidelines for energy efficiency.

Contact us at our web site: http://www.monitors.be.philips.com

Safety precautions and maintenance

- Unplug the monitor, if you are not going to use it for an extended period of time.
- Unplug the monitor, if you need to clean it with a slightly damp cloth. Wiping the screen with a dry cloth is okay when the power is disconnected. However, never use alcohol or ammonia-based liquids.
- Consult a service technician if the monitor does not operate normally when following the instructions in this manual.
- The back cover should be removed only by qualified service personnel.
- Keep the monitor out of direct sunlight and away from stoves or any other heat source.
- The top of the monitor is not a shelf. Remove any object that could fall into the vents or prevent proper cooling of the monitor's electronics.

- Keep the monitor dry. To avoid electric shock, do not expose it to rain or excessive moisture.
- Keep the monitor away from magnetic objects, such as speakers, electric motors, transformers, etc.
- When positioning the monitor, make sure the power plug and outlet are easily accessible.

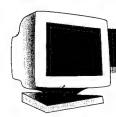

End-of-life disposal

Your new monitor contains materials that can be recycled and reused. Specialized companies can recycle your product to increase the amount of reusable materials and to minimize the amount to be disposed of.

Please find out about the local regulations on how to dispose of your old monitor.

DESCRIPTION OF CONTROLS

VOLUME Button — Press the button to adjust the sound from the speakers.

CONTRAST Button – Press this button to adjust the screen's contrast.

LED – Light Emitting Diode turns green when the monitor is on and at full power.

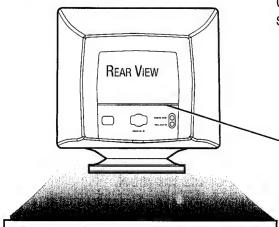

EARPHONES Jack – Plug in earphones here. This mutes the sound from the front speakers.

ROTARY Knob – Helps guide you through the On Screen Display and also adjusts settings such as Volume, Brightness, and Contrast.

CABLE COVER — Snaps onto the back of the monitor to conceal cable connections. (Cable connections in the manual are shown without the cover on.)

SPEAKERS – Transmit sounds from your computer or amplifier. One speaker on each side of the monitor.

MICROPHONE Jack – Plug in a microphone to transmit sound through the side speakers or to the computer. See page 16.

VIDEO IN ⊕

USB Connector (under the edge, optional) – Slot for plugging in the USB Hub-optional hardware that allows true Plug-and-Play. For details, see page 16.

Audio in Jack – Connect the supplied audio cable to send sound from a computer or amplifier to the monitor's speakers.

MICROPHONE OUT Jack – Connect the supplied microphone cable to transmit sound from the monitor to a computer or amplifier.

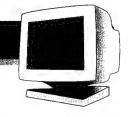

Power Plug – Plug the power cord in here. See foldout for details.

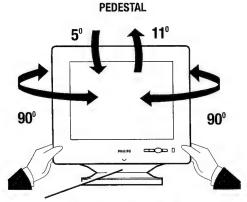

VIDEO IN Jack — One end of the cable is already connected here. The other end connects to the computer. See foldout for details.

AUDIO IN O

MIC. OUT ⊕

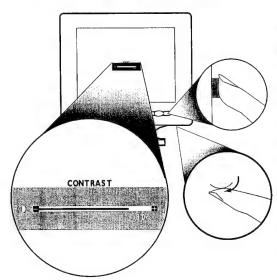

DESCRIPTION OF CONTROLS

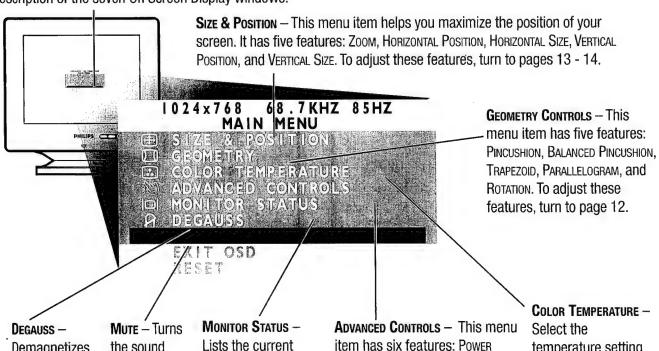

PEDESTAL – With the built-in pedestal, you can tilt and swivel the monitor to the most comfortable viewing angle. To best use your monitor, always place it at eye level.

FRONT PANEL BUTTONS / ROTARY KNOB

Using the Front Panel BUTTONS — Select one of the four front panel buttons, then use the Rotary knob to make the adjustment or select an additional feature. To adjust a particular feature, see the page for that feature. For example, Contrast is on page 4.

On Screen Display — Your monitor is preset at the factory. However, you can adjust it using the On Screen Display button and the Rotary knob described on page 2. The way to do so is through the On Screen Display (OSD). Below is a brief description of the seven On Screen Display windows.

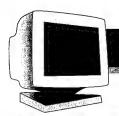

Degauss –
Demagnetizes
your screen. If
color splotches
or impurities
appear on your
screen, you
may want to
try this. For
details, see
page 6.

MUTE - Turns the sound from your speakers On or Off. Mute Off is the default. For details, see page 5. Monitor Status – Lists the current vertical and horizontal scanning frequencies and tells you the serial number of the monitor. For details, see page 6.

SAVING, LANGUAGE,
DDC1 / 2B, OSD TIMER, MOIRE, and
SYNC INPUT SELECT. To adjust these
features, turn to pages 7 - 9.
Note: Language allows you to
change the On Screen Display
from English to French, Spanish,
German, or Italian. See page 7
for details.

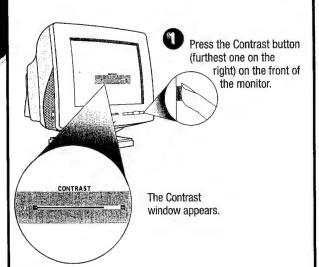

Color Temperature – Select the temperature setting for the best color for your work. You can even customize your color settings. There are four selections: 9300° K, 6500° K, USER 1, and USER 2. For details, turn to pages 10 - 11.

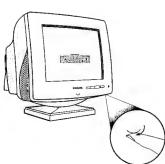

FRONT PANEL CONTROLS

CONTRAST

To adjust your screen's contrast, follow the steps below. Contrast is the difference between the light and dark areas on the screen. A 100% contrast level is recommended.

When finished, press the CONTRAST button again. The Contrast screen

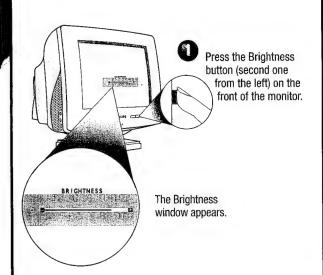

SMART HELP

To continue to Brightness, press the Brightness button on the front of the monitor. Next, follow steps 2 - 3 under Brightness.

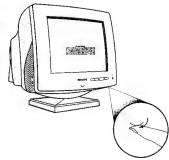

If you do not press the CONTRAST button a second time, the Contrast window will "time out" (disappear) after five seconds. You can change this time. See page 8 for time out options.

BRIGHTNESS

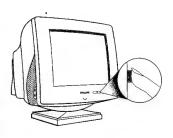

To adjust your screen's brightness, follow the steps below. Brightness is the overall intensity of the light coming from the screen. A 50% brightness level is recommended.

Turn the ROTARY knob (at the lower righthand corner of the monitor) to adjust the brightness.

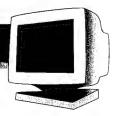

When finished, press the **BRIGHTNESS** button again. The Brightness screen disappears.

SMART HELP

To continue to Volume, press the Volume button on the front of the monitor. Next, follow steps 2 - 3 under Volume.

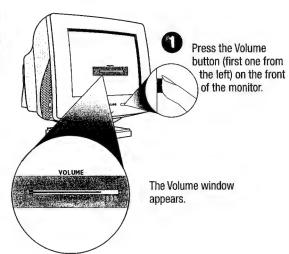

If you do not press the Brightness button a second time, the Contrast window will "time out" (disappear) after five seconds. You can change this time. See page 8 for time out options.

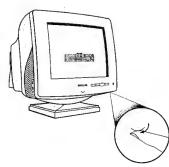

FRONT PANEL CONTROL / MAIN MENU

VOLUME

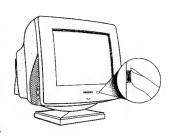

To adjust your monitor's volume, follow the steps below. The volume control adjusts the sound from the two front-mounted speakers or the earphones jack.

Turn the
ROTARY Knob
(at the
lower righthand corner
of the
monitor) to
adjust the
volume.

When finished, press the VOLUME button again. The Volume screen disappears.

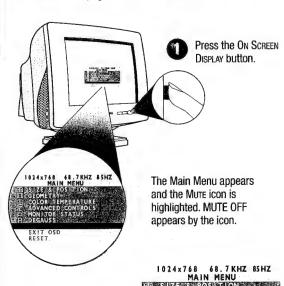

SMART HELP

After Volume Window has disappeared, to continue to the Main Menu, press the larger OSD (On Screen Display) button between the Brightness and Contrast buttons. Next, follow steps 2 - 3 under MUTE.

If you do not press the Volume button a second time, the Volume window will "time out" (disappear) after five seconds. You can change this time. See page 8 for time out options.

MUTE

To completely turn off the volume (but still return to the former level), follow the steps below. The mute control turns off the sound from the two front-mounted speakers or the earphones jack. Note: audio is muted from monitor speakers when earphones are connected. See pages 2 and 16 for details.

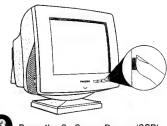

To turn the mute off, press the On Screen Display button and repeat steps 2 - 3.

Press the On Screen Display button a second time. MUTE ON appears by the icon and EXIT OSD is highlighted.

Press the On Screen Display (OSD) button a third time to exit the OSD.

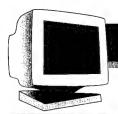

SMART HELP

To go to Degauss . . .

... instead of pressing the On Screen Display (OSD) button a third time, turn the Rotary knob until Degauss is highlighted. Next, press the OSD button. Turn to the next page and follow steps 2 - 3.

... once you have exited the OSD, press the OSD button and turn the Rotary knob until Degauss is highlighted. Next, press the OSD button. Turn to the next page and follow steps 2 - 3.

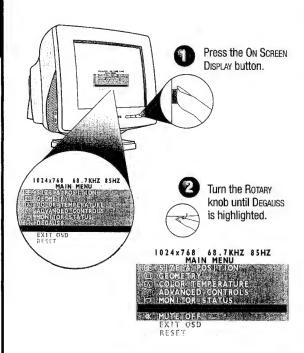

If you do not press the OSD button a third time, the OSD window will "time out" (disappear) after five seconds. You can change this time. See page 8 for time out options.

MAIN MENU WINDOWS

DEGAUSS

P Degaussing removes electromagnetic build up that may distort the color on your screen. To degauss your screen, follow the steps below.

For a moment, the screen will be distorted. Then it will return to normal. You will be at Main Menu. Exit OSD will be highlighted.

SMART HELP

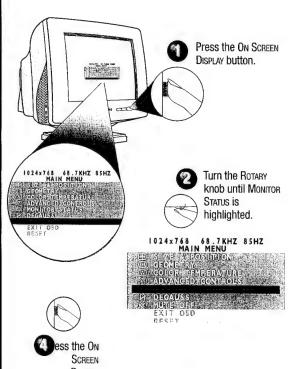

After returning to the Main Menu . . .

... to continue to Monitor Status, turn the Rotary knob until Monitor Status is highlighted. Next, follow steps 2 - 3 under Monitor Status in the next column.

... to exit completely, press the OSD button.

MONITOR STATUS

Monitor Status tells you the vertical and horizontal scanning frequencies that your computer is using to operate your monitor. It also tells you the serial number of your monitor. Note: This screen is for review only.

DISPLAY
button to exit
the Monitor
Status
screen and
return to the
Main Menu.
EXIT OSD will
be
highlighted.

Press the On Screen Display button to bring up the Monitor Status screen.

SMART HELP

After returning to the Main Menu ...

 \dots to continue to Advanced Controls, turn the Rotary knob until Advanced Controls is highlighted. Next, follow steps 2 - 3 under Advanced Controls on the next page.

... to exit completely, press the OSD button.

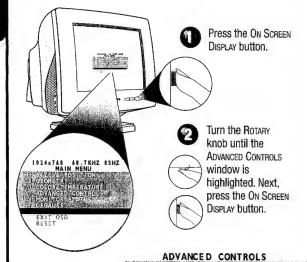

Note: Neither the scanning frequencies nor the serial number can be changed at this screen. The scanning frequencies are established by your computer. They also appear at the top of the Main Menu screen. The serial number is entered at the factory.

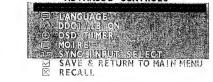

ADVANCED CONTROLS WINDOW

POWER SAVING

Power Saving helps save energy when the monitor is on but not being used. After a preset time, the monitor will go blank if not being used. "Power Saving On" is the default setting. To turn Power Saving Off, follow the steps below.

Press the ON SCREEN DISPLAY button to exit the Main Menu.

. . after returning to the Size & Position window [but before press the On Screen Display (OSD) button in step 6], turn the ROTARY knob until another feature - for example, VERTICAL POSITION - is highlighted. Next, follow steps 2 - 6 under Vertical Position.

. after you have exited completely, press the OSD button and follow the steps under that feature, for example, VERTICAL POSITION.

Position ERTICAL ERTICAL

VERTICAL Position adjusts the image on your screen either up or down. Use this feature if your image does not appear centered. Vertical Size expands or contracts the image on your screen, pushing it out toward the top and bottom of pulling it in toward the center.

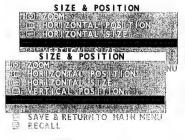

Turn the ROTARY knob until Size & Position window is highlighted. Next, press the ON SCREEN DISPLAY button. Then, turn the ROTARY knob until Vertical. Position or Vertical Size is highlighted.

Press the ON SCREEN DISPLAY button to add your change and return to the Main Menu. Press again to exit. See below for other options.

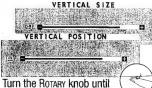

Press the On Screen DISPLAY button to bring up the Vertical Position or Vertical Size screen.

When you are done. press the ON SCREEN DISPLAY button.

Turn the Rotary knob until the image is vertically balanced or the vertical size you want.

SMART HELP

To make other changes in the Main Menu . . .

. . after returning to the Main Menu [but before press the On Screen Display (OSD) button a second time in step 6], turn the ROTARY Knob until another feature is highlighted. Next, turn to the page for that feature and follow the steps.

. . after you have exited completely, press the OSD button and follow the steps under that feature.

SAVE, CANCEL, EXIT OSD, AND RESET

SAVE & RECALL FROM A WINDOW

There are three ways to save your changes: by pressing the Front Panel Button, by selecting Save from the On Screen Display, or by letting the On Screen Display time out. Each method saves the changes you have made in a particular window.

For example, to make a change in the brightness, press the BRIGHTNESS button on the front panel, make your change, then press the Brightness button again. (See page 4 for details.) You can also let the display time out and the change will be saved. Note: Brightness, Contrast, and Volume do not have a SAVE menu selection.

To cancel a change made in the Brightness, Contrast, and Volume

windows individually, you must reenter each window and change the setting.

In some windows (Size & Position and Geometry), you can save all your changes at once. In the Size & Position window, you can make changes to each of the five items. When you are done, highlight the Save item and press the On Screen Display button. (See pages 13 - 14 for details.) You can also let the display time out and the change will be saved. SIZE & POSITION

the SIZE & Position window. you can select CANCEL from the On Screen Display. If you

To cancel a change made in Rep Correct Control and Con

have made a change to only

one item - for example, Zoom - then only Zoom will be changed back to the previous setting. If more than one item has been changed, but not saved individually, then all the items changed will be returned to their previous settings. For example, if you made changes to Zoom, HORIZONTAL SIZE, and VERTICAL POSITION and did not save them individually, all three will be changed back when you select Cancel.

In some windows (Advanced Controls and Color Temperature), only individual saves are possible. For example, in the COLOR TEMPERATURE window, if you select User 1 and make changes (See page 11 for details.), you must either save or cancel those changes before moving on. While you could wait for the USER 1 window (below) to time out, it is not recommended. Since you have not formally saved this change as your selection, the next time you go into the Color Temperature window, the screen will change to selection (USER 1, USER 2, 9300° K, or 6500° K) last stored by using

Save. A checkmark appears beside that selection.

To cancel a change made in Color Temperature (or

ADVANCED CONTROLS), select CANCEL from the on screen display. Only the last item changed will be changed back. All other items will remain unchanged.

EXIT OSD & RESET FROM THE

Exiting from the On Screen Display removes the On Screen Display from the monitor screen. Resetting from the On Screen Display returns everything in all the windows to factory presets.

TO EXIT THE ENTIRE ON SCREEN DISPLAY

When you have finished work in any of the windows of the Main Menu (even selecting Mute On / Mute Off), you will return to the Main 68 68.7 KHZ 85HZ MAIN MENU

Menu and Exit OSD will be highlighted. To exit, simply press the On Screen Display button.

You can, however, use the Rotary knob and scroll to another menu item, for

example, Advanced Controls. When Advanced Controls is highlighted, press the On Screen Display button and that

window will replace the Main Menu. You can now make changes in that window. When done, you will, again, return to the Main Menu and Exit OSD will be highlighted

RESET ENTIRE ON SCREEN DISPLAY

Selecting RESET from the Main Menu resets all the changes you have made in all the windows of the Main Menu. For example, if the language (See Language, page 7.) has been changed, it is taken back to English.

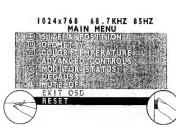

Use this feature only when you want to return all your changes back to their original settings.

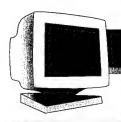

EXITING BRIGHTNESS VOLUME, & CONTRAST

If you push the Volume, Brightness, or Contrast button to exit (See steps 3 on pages 4 and 5.) and find yourself in the Main Menu, follow the steps below.

Turn the ROTARY knob until Exit OSD is selected, then press the On Screen Display button.

Always exit the Volume, Brightness, or Contrast On Screen Displays by pressing the Volume, Brightness, or Contrast button (steps 3 on pages 4 and 5).

ADDITIONAL HOOK UP OPTIONS

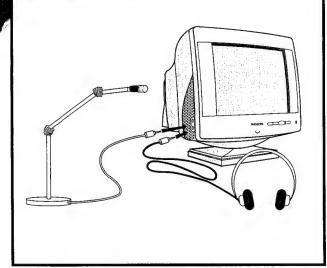

AUDIO AND USB SET UPS

MICROPHONE AND EARPHONES JACKS

In addition to built-in speakers and microphone, you can connect this monitor to optional earphones and a microphone. The jacks are on the left side of the monitor.

To use the microphone with your computer or an amplifier, make the connections shown below.

Note: When the earphones are plugged in, there will be no sound from the built-in speakers.

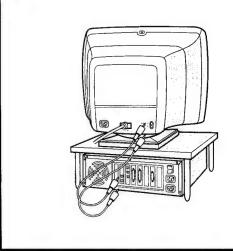

MICROPHONE AND AUDIO-IN JACKS

A microphone jack is on the back of the monitor. Use it and the supplied cable to connect your monitor to your computer or an amplifier (if either has the right type of jack).

On the back of this monitor there is also an audio-in jack. Use it and the supplied cable to connect your monitor to your computer or an amplifier (if either has the right type of jack).

See page 2 for more detailed illustrations of the jacks' locations.

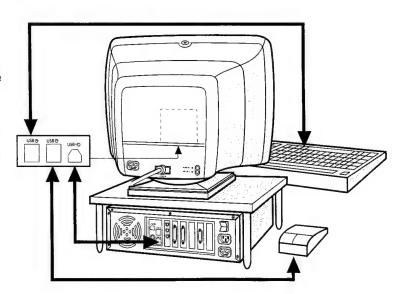

Refer to the owner's manuals included with your earphones and microphone for a detailed guide to setting up these items.

USB (OPTIONAL CONNECTIONS

USB (Universal Serial Bus) is an innovation in connecting your IBM-compatible computer to your monitor. By using the USB, you will be able to connect your keyboard, mouse, printer, and other peripherals to your monitor instead of having to connect them to your computer. This will give you greater flexibility in setting up your system. Plus, you will have true plug-and-play capability. While the software is still being developed, Philips has included the hardware so you will be ready to take advantage of this next generation in computer development.

For an IBM-compatible Computer:

- 1. Turn off the computer.
- 2. Connect the (optional) USB Hub and cable to the computer and to the monitor. (Computer must have a USB port.)
- 3. Connect the power cable.
- 4. Turn on the monitor. Then turn on the computer.
- **5.** With the installation of the correct software, you will be able to connect specially-made peripherals to the monitor.

Refer to the "Setting Up your Philips monitor" foldout for a more detailed guide to setting up your monitor.

PCS 98 314

ADDITIONAL INFORMATION

POWER SAVING FEATURE / GLOSSARY

AUTOMATIC POWER SAVINGS & PRESET RESOLUTION MODES

If you have VESA's DPMS compliance display card or software installed in your PC, the monitor can automatically reduce its power consumption when not in use. If input from a keyboard, mouse, or other device is detected, the monitor automatically "wakes up." The table at left shows the power consumption and signalling of this automatic power-saving feature. To turn this feature on and off, see page 7. The table at right shows the 9 factory preset resolution modes. The maximum number of modes is 13. This leaves room for additions.

Power Management Definition						
VESA's mode	Video	H-sync	V-sync	Power	Power	LED
				used	saving(%)	color
ON	Active	Yes	Yes	< 110W	0%	Green
Stand-by	Blanked	No	Yes	< 15W	86%	Yellow
Suspend	Blanked	Yes	No	< 15W	86%	Yellow
OFF	Blanked	No	No	< 5W	95.6%	Amber

This monitor is Energy Star compliant and power management compatible.

AS AN ENERGY STAR PARTNER, PHILIPS HAS DETERMINED THAT THIS PRODUCT MEETS THE ENERGY STAR GUIDELINES FOR ENERGY EFFICIENCY. The proper operation of the function requires a computer with VESA DPMS power management capabilities. When used with a computer equipped with VESA DPMS, the monitor is Energy Star compliant.

Mode	RESOLUTION	H. Freq. (KHZ)	V. Freq. (Hz)	STANDARD

GLOSSARY

Here are a few definitions that may help you.

There are a few definitions that may not you.

Brightness Refers to how light or dark the overall screen is.

Color

A term used to refer to the color balance, uniformity, and saturation settings on your monitor screen. Color (even white,

Gray, and black) on your screen is achieved by blending (or balancing) three primary colors: red, green, and blue. As you
increase or decrease any one of these colors, the color temperature changes. For example, at 9300° K, you are using more
blue in your color temperature; therefore, your screen will be saturated with more blue and should appear uniformly "bluer"
from one side of the screen to the other. At 6500° K, you are using more red in your mixture. True color balance is achieved

when a gray object shows no traces of either red, green, or blue, regardless of the brightness of the image.

Contrast Refers to the sharpness of objects on the screen and the ability to easily distinguish one from the other.

Degauss The process by which metal parts of the screen are demagnetized in order to reduce screen distortion and color impurity.

DDC (Display Data Channel) is a signaling standard established to help the performance of personal computers. In order to use this function, your computer must be designed for DDC. There are several types of DDC. Most computer monitors

are designed for DDC1 and DDC2 Level B (DDC1 /2B).

Geometry A set of controls that allows you to adjust the alignment of the picture on the monitor screen. The goal is to "square up"

the picture. This is done by adjusting such items as balanced pincushion, pincushion, parallelogram, rotation, and

trapezoid.

Moire A fringe pattern caused by the interference between two superimposed line patterns.

Noise Term used to refer to interference with the monitor's picture.

USB Universal Serial Bus. A way to connect your IBM-compatible computer, monitor, and peripherals for true Plug-and-Play

functions. This is an emerging technology.

ADDITIONAL INFORMATION

TROUBLESHOOTING

Having trouble? Something not working? Before calling for help, try these suggestions.

HAVING THIS PROBLEM?

CHECK THESE ITEMS

No Picture (Power LED not lit) Make sure the Power cable is plugged in the wall and back of the monitor.

Power button on top of the monitor should be in the ON position.

Disconnect the monitor from the power outlet for about one minute.

No Picture

Make sure the computer is turned on.

(Power LED is Amber or Yellow)

(Power LED is Green)

Make sure the monitor cable is properly connected to your computer.

Check to see if the monitor cable has bent pins.

The Energy Saving Feature may be activated. See pages 7 and 17 for details.

No Picture

Make sure the Brightness and Contrast controls are set correctly. See page 4 for details

Make sure the monitor cable is properly connected to your computer.

Check to see if the monitor cable has bent pins. Make sure the computer Power button is on.

Screen shows

Make sure the monitor cable is properly connected to your computer. See Setting Up Guide.

Check to see if the monitor cable has bent pins.

Make sure the computer is turned on

NO SYNC INPUT

when you turn on the monitor.

No Color or intermittent Black-and-White

If you are using a non-VESA-DDC standard video card, turn the DDC1 / 2B feature Off. See page 8.

Color appears blotchy

The picture may need degaussing. See page 6 for details.

Remove any nearby magnetic objects.

Face the monitor East for best picture quality.

Missing one or

more colors

Check user settings of Color Temperature. See pages 10 and 11 for details.

Make sure the monitor cable is properly connected to your computer.

Check to see if the monitor cable has bent pins. Adjust Sync Input Select, See page 9 for details.

Dim Picture

Adjust the Brightness and Contrast controls. See page 4 for details.

Check your video card and the manual instructions for it. It may be a non-VESA-DDC Standard card.

Adjust Sync Input Select. See page 9 for details.

Picture is too large

or too small

Adjust the Horizontal and/or Vertical Size. See pages 13 and 14 for details.

Adjust the Zoom. See page 13 for details.

Edges of the picture are not square

The geometry controls require adjusting. See page 12 for details.

Picture has a double

image

Eliminate the use of a video extension cable and/or video switch box.

Face the monitor East for best picture quality.

Picture is not sharp

Check to make sure Moire is switched off. See page 9.

Adjust Sync Input Select. See page 9 for details.

No Audio

Make sure mute is not activated. See page 5 for details.

Make sure the Audio-in cable is securely plugged into the monitor and the audio source.

See pages 2 and 16 for details.

Unstable Picture

Increase your refresh rate. Consult your computer manual for details.

Windows '95 cannot find your video card

Select "Super VGA" under Standard Display Types, or contact your video card manufacturer

for the right drivers.

For further assistance, contact Philips at (800) 835-3506 or (423) 475-0280.

TELEVISION/MONITOR SAFETY GUIDELINES FOR THE PROFESSIONAL SERVICE TECHNICIAN

Safety Checks

After the original service problem has been corrected, a complete safety check should be made. Be sure to check over the entire set, not just the areas where you have worked. Some previous servicer may have left an unsafe condition, which could be unknowingly passed on to your customer. Be sure to check all of the following:

Fire and Shock Hazard

- Be sure all components are positioned in such a way as to avoid the possibility of adjacent component shorts. This is especially important on those chassis which are transported to and from the service shop.
- Never release a repaired unit unless all protective devices such as insulators, barriers, covers, strain reliefs, and other hardware have been installed in accordance with the original design.
- Soldering and wiring must be inspected to locate possible cold solder joints, solder splashes, sharp solder points, frayed leads, pinched leads, or damaged insulation (including the ac cord). Be certain to remove loose solder balls and all other loose foreign particles.
- Check across-the-line components and other components for physical evidence of damage or deterioration and replace if necessary. Follow original layout, lead length, and dress.
- No lead or component should touch a receiving tube or a resistor rated at 1 watt or more. Lead tension around protruding metal surfaces or edges must be avoided.
- Critical components having special safety characteristics are identified with an s by the Ref. No. in the parts list and enclosed within a broken line* (where several critical components are grouped in one area) along with the safety symbol s on the schematic diagrams and /or exploded views.
- When servicing any unit, always use a separate isolation transformer for the chassis. Failure to use a separate isolation transformer may expose you to possible shock hazard, and may cause damage to servicing instruments.
- Many electronic products use a polarized ac line cord (one wide pin on the plug). Defeating this safety feature may create a potential hazard to the servicer and the user. Extension cords which do not incorporate the polarizing feature should never be used.
- After reassembly of the unit, always perform an ac leakage test or resistance test from the line cord to all exposed metal parts of the cabinet. Also, check all metal control shafts (with knobs removed), antenna terminals, handles, screws, etc. to be sure the unit may be safely operated without danger of electrical shock
- * Broken line

Implosion

- All picture tubes used in current model receivers are equipped with an integral implosion system. Care should always be used, and safety glasses worn, whenever handling any picture tube. Avoid scratching or otherwise damaging the picture tube during installation.
- Use only replacement tubes specified by the manufacturer.

- Be sure procedures and instructions to all your service personnel cover the subject of X-radiation. Potential sources of X-rays in TV receivers are the picture tube and the high voltage circuits. The basic precaution which must be
- exercised is to keep the high voltage at the factory recommended level.

 To avoid possible exposure to X-radiation and electrical shock, only the manufacturer's specified anode connectors must be used.
- It is essential that the service technician has an accurate HV meter available at all times. The calibration of this meter should be checked periodically against a reference standard.
- When the HV circuitry is operating properly there is no possibility of an X-radiation problem. High voltage should always be kept at the manufacturer's rated value - no higher - for optimum performance. Every time a color set is serviced, the brightness should be run up and down while monitoring the HV with a meter to be certain that the HV is regulated correctly and does not exceed the specified value. We suggest that you and your technicians review test procedures so that HV and HV regulation are always checked as a standard servicing procedure, and the reason for this prudent routine is clearly understood by everyone. It is important to use an accurate and reliable HV meter. It is recommended that the HV reading be recorded on each customer's invoice, which will demonstrate a proper concern for the customer's safety.
- When troubleshooting and making test measurements in a receiver with a problem of excessive high voltage, reduce the line voltage by means of a Variac to bring the HV into acceptable limits while troubleshooting. Do not operate the chassis longer than necessary to locate the cause of the excessive HV.

- New picture tubes are specifically designed to withstand higher operating voltages without creating undesirable X-radiation. It is strongly recommended that any shop test fixture which is to be used with the new higher voltage chassis be equipped with one of the new type tubes designed for this service. Addition of a permanently connected HV meter to the shop test fixture is advisable. The CRT types used in these new sets should never be replaced with any other types, as this may result in excessive X-radiation.

 It is essential to use the specified picture tube to avoid a possible X-radiation
- problem
- Most TV receivers contain some type of emergency "Hold Down" circuit to prevent HV from rising to excessive levels in the presence of a failure mode. These various circuits should be understood by all technicians servicing them, especially since many hold down circuits are inoperative as long as the receiver performs normally.

Leakage Current Cold Check

- Unplug the ac line cord and connect a jumper between the two prongs of the
- Turn on the power switch.
- Measure the resistance value between the jumpered ac plug and all exposed cabinet parts of the receiver, such as screw heads, antennas, and control shafts. When the exposed metallic part has a return path to the chassis, the reading should be between 1 megohm and 5.2 megohms. When the exposed metal does not have a return path to the chassis, the reading must be infinity. Remove the jumper from the ac line cord.

Leakage Current Hot Check

- Do not use an isolation transformer for this test. Plug the completely
- reassembled receiver directly into the ac outlet.

 Connect a 1.5k, 10W resistor paralleled by a 0.15uF. capacitor between each exposed metallic cabinet part and a good earth ground such as a water pipe, as shown above.
- Use an ac voltmeter with at least 5000 ohms/ volt sensitivity to measure the
- potential across the resistor.

 The potential at any point should not exceed 0.75 volts. A leakage current tester may be used to make this test; leakage current must not exceed 0.5milliamps. If a measurement is outside of the specified limits, there is a possibility of shock hazard. The receiver should be repaired and rechecked before returning it to the customer.
- Repeat the above procedure with the ac plug reversed. (Note:An ac adapter is necessary when a polarized plug Is used. Do not defeat the polarizing feature of the plug.)

Picture Tube Replacement

The primary source of X-radiation in this television receiver is the picture tube. The picture tube utilized in this chassis is specially constructed to limit X-radiation emissions. For continued X-radiation protection, the replacement tube must be the same type as the original, including suffix letter, or a Philips approved type.

Parts Replacement

Many electrical and mechanical parts in Philips television sets have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. The use of a substitute part which does not have the same safety characteristics as the Philips recommended replacement part shown in this service manual may create shock, fire, or other hazards.

WARNING: Before removing the CRT anode cap, turn the unit OFF and short the HIGH VOLTAGE to the CRT DAG ground. SERVICE NOTE: The CRT DAG is not at chassis ground.

Setting Up your Philips monitor

Installation de votre moniteur Philips.

Configuración de su monitor Philips.

This foldout is designed to help you use your monitor as soon as possible. Refer to your owner's manual for detailed information. You may also contact us at our web site: http://www.monitors.be.philips.com

Ce dépliant est conçu pour vous aider à utiliser votre moniteur du plus vite possible. Consulter votre manuel d'utilisateur pour des informations détaillées. Vous pouvez aussi nous contacter sur notre site Web: http://www.monitors.be.philips.com

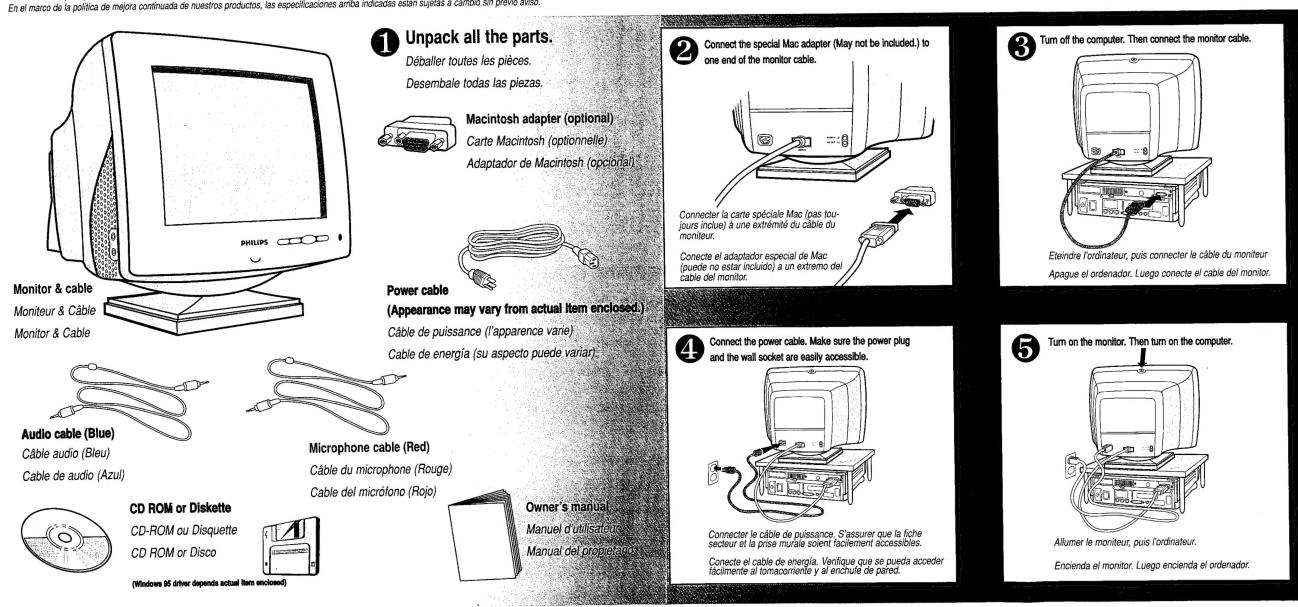

Esta hoja plegable está diseñada para ayudarle a usar su monitor tan pronto como sea posible. Consulte su manual si desea información detallada. También puede comunicarse con nosotros a través de nuestra página web: http://www.monitors.be.philips.com

Because of a policy continuous product improvement, the information mentioned by this documents are subject to change without notice. Du fait de notre politique d'amélioration constante de nos produits, les spécifications ci-dessus sont sujettes à modification sans avis préalable. En el marco de la politica de mejora continuada de nuestros productos, las especificaciones arriba indicadas están sujetas a cambio sin previo aviso.

To hook up your monitor to a Macintosh-type computer, follow the steps below. To hook up your monitor to an IBM-compatible computer, follow step 1, then turn over this foldout. In either case, before installing this monitor, please refer to the user's guide of your computer and video adapter to see if this equipment needs any additional setting.

Suivre les étapes suivantes pour connecter votre moniteur à un ordinateur du type Macintosh. Pour connecter votre moniteur à un ordinateur compatible IBM, suivre la première étape, puis tourner ce dépliant. En tout cas, avant l'installation de votre moniteur, veuillez vous référer au manuel d'utilisateur de votre ordinateur et carte vidéo pour voir si cet équipement a besoin d'installation supplémentaire.

Para conectar su monitor a un ordenador tipo Macintosh, siga los pasos que se presentan a continuación. Para conectar su monitor a un ordenador compatible con IBM, siga el paso 1, luego voltee esta página. En ambos casos, antes de instalar este monitor, consulte la guía del usuario de su ordenador y de su adaptador de vídeo, para comprobar si este equipo necesita alguna configuración adicional.

Setting Up your Philips monitor

Installation de votre moniteur Philips. Configuración de su monitor Philips.

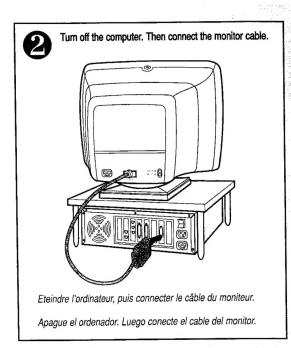

IBM-compatible computer hookup continued from step 1 on other side.

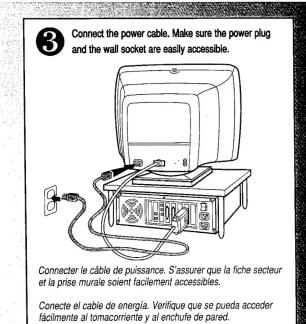

Connecter l'ordinateur compatible IBM, suite de la première étape de l'autre côté.

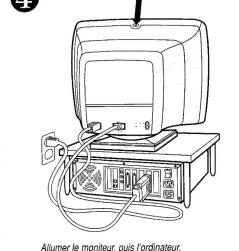

Conexión del ordenador compatible con IBM (continuación del paso 1 del otro lado de la página).

Monitor Model for Windows'95 Driver: Philips 107MB (17 inch/CM2300)

Turn on the monitor. Then turn on the computer.

Allumer le moniteur, puis l'ordinateur,

Encienda el monitor. Luego encienda el ordenador.

If you have Windows '95 . . . Si vous avez Windows '95 . . .

follow these steps to complete setting up your monitor.

- 1. Start Windows '95 and install diskette supplied with this monitor.
- 2. Click on the "START" icon. Next, click on the "SETTINGS" icon. Then click on "CONTROL
- 3. Double-click on "DISPLAY" icon. Next, click on "SETTINGS" tab. Then click on "ADVANCED PROPERTIES" dialog box.
- 4. Click on "MONITOR" tab.
- 5a. If you have an old computer, click on "CHANGE" dialog box. Next, "SELECT DEVICE" screen appears. Now click on "HAVE DISK" dialog box. and select A drive

5b. If you have a new computer, "SELECT DEVICE" screen automatically appears. Click on "HAVE

- DISK" dialog box and select A drive. 6. Select "OK" in the "INSTALL FROM DISK" dialog box. If model name of the Philips monitor is correct, click "OK" tab in the "SELECT DEVICE" dialog box.
- 7. Click "CLOSE" tab in the "ADVANCED PROPERTIES" dialog box. If your Windows '95 version is different or you need more detailed installation information, please refer to the Windows '95 user's manual. For additional information on the monitor, please refer to the owner's manual.

Note: if you insert the disk in your B drive, you will make your selections from that drive and not the A drive.

suivez les étapes suivantes pour terminer l'installation de votre moniteur.

- Démarrer Windows 95 et installer le disquette fournit avec votre moniteur.
- 2. Cliquer sur l'icône "DEMARRER", ensuite, cliquer sur l'icône "PARAMETRES", puis cliquer sur l'icône "PAN-
- 3. Cliquer deux fois sur l'icône "AFFICHER", ensuite cliquer sur l'onglet "PARAMETRES", puis cliquer sur la boîte de dialogue "PROPRIETES AVANCEES".
- 4. Cliquer sur l'onglet "MONITEUR".
- 5a. Si vous avez un ancien ordinateur, cliquer sur la boîte de dialogue "CHANGER". ensuite l'écran "SELECTION-NER UNITE" apparaît. Maintenant cliquer sur la boîte de dialogue "DISQUETTE FOURNIE", et sélectionner le

5b.Si vous avez un ordinateur récent, l'écran "SELECTIONNER UNITE" apparaît automatiquement. Cliquer sur la boîte de dialogue "DISQUETTE FOURNIE" et sélectionner le lecteur A.

- Sélectionner "OK" dans la boîte de dialogue "INSTALLER A PARTIR DE LA DISQUETTE". Si le nom du modèle de moniteur Philips est correct, cliquer sur l'onglet "OK" dans la boîte de dialogue SELECTIONNER UNITE"
- 7. Cliquer sur l'onglet "FERMER" dans la boîte de dialogue "PROPRIETES AVANCEES". Si votre version Windows 95 est différente ou si vous voulez des informations plus détaillées sur l'installation, veuillez vous référer au manuel d'utilisateur de Windows 95. Pour des informations complémentaires sur le moniteur, veuillez vous référer au manuel d'utilisateur.

WHAT TO DO IF YOUR MONITOR ISN'T WORKING

- . . . the Power cable is plugged in the wall and the rear of the monitor.
- ... the Power button on top of the monitor should be in the ON position.
- . . . the monitor cable is properly connected to the back of the monitor and the computer.
- . . . to check to see if the monitor cable has bent pins.

See page 19 of the owner's manual for troubleshooting tips. Or in North America contact Philips at (800) 835-3506 or (423) 475-0280. For all other regions, see the phone numbers in the warranty appendix in the owner's manual. For warranty questions, please see your owner's manual.

Que faire si votre moniteur ne marche pas

S'assurer . .

- , que le câble de puissance soit branché dans le mur et à l'arrière du moniteur.
- . que le bouton Marche/Arrêt au dessus de votre moniteur soit sur MARCHE.
- , que le câble du moniteur soit bien connecté à l'arrière du moniteur et de l'ordinateur.
- . de vérifier que le câble du moniteur n'ait pas de fiches tordues.

Voir page 39 du manuel d'utilisateur pour des conseils de dépannage. Ou bien, en Amérique du Nord, téléphonez à Philips à (800) 835-3506 ou à (423) 475-0280. Pour toute autre région du monde, consultez les numéros de téléphone dans l'appendice de la garantie qui se trouve dans le manual du propriétaire. Si vous avez des questions concernant la garantie, veuillez consulter votre manuel d'utilisa-

¿QUÉ HACER SI SU MONITOR NO FUNCIONA?

Verifique . .

- ... si el cable de energía está enchufado a la fuente de energía y a la parte posterior del
- . . si el botón de alimentación en la parte superior del monitor está en la posición ON.
- ... si el cable del monitor está debidamente conectado a la parte posterior del monitor y
- . . que las clavijas del cable del monitor no estén dobladas.

En la página 59 del manual del propietario encontrará consejos sobre la localización de fallas. O en América del Norte, comunique con Philips al teléfono (800) 835-3506 (llamada gratis) ó al (423) 475-0280. Para todas las otras regiones, vea los numeros del teléfono en el apéndice de la garantía en el manual del usuario. Para consultas sobre la garantía, consulte el manual del propi-

Si tiene Windows '95 . . .

siga estos pasos para finalizar la configuración de su monitor.

- 1. Inicie Windows '95 e instale el disco que se suministra con su monitor.
- Haga clic en el icono "INICIO". Luego haga clic en el icono "CONFIGURACIÓN". Luego haga clic en "PANEL
- Haga doble clic en el icono "PANTALLA". A continuación haga clic en la etiqueta "CONFIGURACIÓN" y luego en el cuadro de diálogo "PROPIEDADES AVANZADAS".
- 4. Haga clic en la etiqueta "MONITOR".
- 5a. Si usted tiene un ordenador viejo, haga clic en el cuadro de diálogo "CAMBIAR". Luego aparece la pantalla "SELECCIÓN DE DISPOSITIVO". Ahora haga clic en el cuadro de diálogo "UTILIZAR DISCO" y seleccione la

- 5b. Si tiene un ordenador nuevo, aparece automáticamente la pantalla "SELECCIONAR DISPOSITIVO". Haga clic en el cuadro de diálogo "UTILIZAR DISCO" y seleccione la unidad A.
- 6. Seleccione "ACEPTAR" en el cuadro de diálogo "INSTALAR DESDE DISCO". Si el nombre del modelo del monitor Philips está correcto, haga clic en la etiqueta "ACEPTAR" del cuadro de diálogo "SELECCIÓN DE
- Haga clic en la etiqueta "CERRAR" del cuadro de diálogo "PROPIEDADES AVANZADAS". Si su versión de Windows '95 es diferente o necesita información más detallada acerca de la instalación, consulte el manual del usuario de Windows '95. Si desea información adicional acerca del monitor, consulte el manual del propietario.
